About the Firm

Design Vision Architects is an architectural design firm that specializes in design visualization to meet your architectural graphics needs on a per-project basis. Using your sketches, CAD drawings, or BIM models, we elaborate your technical drawings into rich architectural 2D and 3D media.

Troy D. Parr, AIA, LEED® AP Principal Architect

2D Illustration

2D computer-generated “hand drawn” illustration offers all the style and nostalgia of a venerable architect's hand sketch, however we deliver the illustration in electronic digital content. Using 2D illustration techniques - hand sketches, colored elevations, site plans, floor plans and other architectural visuals are digital for ease of use. These presentation graphics can be used for approval, promotion or client design evaluation.

3D Rendering

3D visualization brings your design to life. Clients often have a difficult time visualizing a space from a 2D plan. 3D renderings provide a photo-realistic visualization of the space early in the design process and are progressively elaborated as the design is finalized. These visuals allow you to clearly communicate your design concepts to your clients. The visuals allow your clients to market their design before construction begins.

3D Animation/Creative Media

- 3D animation/video of your architectural design for DVD, HD or web-based streaming media
- 3D walk-throughs/fly-bys
- Digital photography with 3D integration
- Project branding and logo design
- Marketing collateral
